## REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for processing a digitally captured image that comprises an imaged document. Each independent claim identifies the uniquely distinct feature, "for transforming said digitally captured image into a binary image, wherein a pixel of said binary image equals a first logical value when a corresponding pixel in said digitally captured image is associated with a value greater than a luminance threshold; or a second logical value otherwise".

The closest prior art, Ueda et al. (USPN 4,845,764), disclose a shape recognition apparatus for detecting a boundary of an object using a video camera converts an image signal to a binary signal, and detects boundary points showing the boundary from the binary signal, then, boundary angle and average of boundary angle difference are calculated based on the boundary points, and thereby corners of the boundary are recognized; while Gallagher (USPN 6,400,848 B1), discloses method for modifying the perspective of a digital image, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
